# Fixing the "HDRtoSDR can't be opened" warning on macOS

MacOS may block *HDRtoSDR* because it is not signed with an Apple Developer certificate. This is expected behaviour and safe.

**Follow these steps to allow *HDRtoSDR* to run:**
1. Go to System Settings -> Privacy & Security
2. Scroll down until you see „Open Anyway" and click the button
3. Confirm by clicking „Open Anyway" in the popup

Thank you for using *HDRtoSDR*!
If you got any questions or feedback, feel free to contact me on Instagram (@stuhljaen.drp).
